1. Applicant's election of Group I, claims 17-26 in the response of April 12, 2004 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

Applicant is requested to cancel the non-elected claims 27-31 to expedite prosecution.

2. This application is in condition for allowance except for the following formal matters:

Applicant needs to cancel non-elected claims 27-31.

Prosecution on the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

A shortened statutory period for reply to this action is set to expire **TWO MONTHS** from the mailing date of this letter.

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Ravela discloses three drawing devices (5, 8, 10) which pull a tube containing an optical fiber along the process line. However, it is not taught in Ravela that the drawing devices apply different amounts of force to the tube as set forth in the instant claims nor does such occur under cooling only—the second and third drawing devices operate to pull the tube from first and second furnaces. Schlaeppi et al and Schneider both disclose first and second cooling vats/baths and extractor (ie, pulling or drawing) means to pull the tube from each bath. However, these references do not teach applying first, second and third traction forces to the extruded tube during cooling with different amounts of force being applied to the tube as set forth in the

Art Unit: 1732

instant claims, with the traction force being greatest at a point in the line where a substantial lack of congruence between the fiber and tube exists, such being the reason the instant claims are allowable over the prior art of record.
